Player 1

CDJ-3000

Mixer

DJM-A9

Player 2

CDJ-3000

TECHNICAL RIDER

1.) (TWO) Pioneer CDJ 3000 OR (TWO) CDJ 2000NXS2

2.) (ONE) Pioneer DJM A9 mixer OR DJM 900NXS2, with CDJs hooked into Channels 2 and 3

3.) (ONE) high quality speaker monitor hooked into the Booth output of the mixer and placed on the right side of the DJ setup

4.) (ONE) professional wireless handheld microphone (Shure QLXD or ULXD, SM58 capsule, or equivalent) for DJ announcements, routed through the house mixing console where one is in use, otherwise via balanced XLR output into the DJ mixer microphone input. Fresh batteries at the start of the performance, spares on site, frequency scanned on site, and the microphone tested through the PA at sound check before doors.

5.) All above equipment to be placed on a table at least 6 feet wide and approximately 36 inches high, an adjustable height table or a table on risers preferred, with room for a laptop computer directly beside the DJ setup on either side. As an alternative, equipment may be placed on road cases of a matching height, provided the surface is level and stable and the cases are fully covered in clean black drape, so the setup presents cleanly.

6.) (ONE) power plug strip (USA) with a minimum of 2 available plug inputs, easily accessible

7.) Speakers and amps shall be negotiated between the PURCHASER and the sound company according to space size. A written list of speakers and amps MUST be approved by the ARTIST in writing at least 72 hours prior to the event.

8.) The PURCHASER must obtain the written approval of the ARTIST for any alternative setup conditions at least seven business days prior to the event. Otherwise, this is a breach of contract: the ARTIST is not required to perform and must still be paid in full.
